

Additional Dust Control System features:

- Assembles onto the X-Carve with minimal disassembly.
- Detaches in seconds without any tools.
- Easily adjustable height setting for any material thickness.
- Includes a grounded hose and routing system for clean hose management. Grounding is important because it dissipates static electricity that, in certain situations, can ignite combustible materials moving in or out of vacuums.
- The hose is long enough that you don't need an additional hose, and its universal fitting is compatible with most shop vacuums.
